

Understanding Climate Change & Environmental Awareness

Sustainability is quickly becoming a high priority for many businesses.

Making moves towards becoming a 'greener' organisation can also provide cost saving initiatives, such as reducing waste or saving energy.

This qualification covers the nature of climate change and the role that individuals, businesses and other organisations play in helping to reduce carbon emissions.

This course gives the knowledge and understanding for individuals to act as drivers of positive change within the workplace and at home.

Unit 01: Understand climate change, sustainability and environmental protection

In this unit, learners will develop an understanding of climate change, sustainability, and environmental protection

Unit 02: Understand industry and the environment

This unit allows learners to develop an understanding of the roles that business and industry play in protecting the environment

Unit 03: Understand resource efficiency and waste management

This unit will help learners develop an understanding of how to reduce environmental impact by more efficient use of resources

*The level 2 distance learning courses are fully funded.
The only criteria is that you are over 19, have lived in the EU for the past 3 years and currently live in England.*
